TECHNICAL STEAM INSPECTION

BHS Corrugated Lifecycle Service

TECHNICAL STEAM INSPECTION

Our Service

Periodic inspections, during which your corrugator is checked, are the basis of any sustainable maintenance strategy. Regular technical inspections are essential in order to be able to plan maintenance and repair measures with foresight. The inspection of your steam system includes functional testing with the aim of ensuring optimum production. Any problems that may occur are identified, traced back to their causes and eliminated if possible.

Content

- Checking of steam elements for function
- Checking of return valves for function
- Checking of possible leaks
- Correct opening and closing of condensate system
- Condition check of steam hoses
- Corrosion check

Your Benefits

- Identification and elimination of technical limitations and malfunctions, thereby reducing downtimes
- Detailed report and solution concept
- Involvement of your staff – coaching and know-how transfer
