# BHS Corrugated Lifecycle Service

# CORRUGATOR PERFORMANCE

# INSPECTION

## Our Service

The Corrugator Performance Inspection is designed to provide a holistic evaluation of your corrugator and its peripheral systems, focusing on production performance, product quality, and technical infrastructure. A key element is the review of process reliability to ensure consistent and stable production.

The inspection is conducted in a structured and hands-on approach across several phases:

### 1. Analysis & Planning

In an initial consultation, we analyze relevant production data and align on the inspection's goals, scope, and timeline. We also exchange essential background information about the plant, current production status, and existing challenges.

### 2. On-Site Assessment

This phase includes a detailed inspection of the corrugator and its peripheral systems.

Through direct dialogue with plant staff and management, we identify processes, pain points, and opportunities for improvement.

### 3. Evaluation & Reporting

All findings are compiled into a comprehensive final report and discussed in a closing meeting — transparent, solution-oriented, and timely.

## Content

- Inspection of the production process
- Inspection of the quality of the produced corrugated board
- Inspection of the periphery of the corrugator
- Comprehensive report with improvement plan

## Your Benefits

- Extensive overview over the state of productivity of the corrugator
- Assessment through an expert with many years of experience
- Detailed plan on how to achieve set goals

## More Information

### Duration

4 Days
